Nutraceuticals

Originally known as food actives and also called phytonutrients, these powerful compounds are found in herbs, fruits, vegetables, and whole grains. Nutraceuticals are the key constituents of certain plants such as olives. Olive leaf is one of the oldest, most well recognized and effective of all the phytonutrients known to researchers today. In fact, out of all the nutraceuticals currently available, Olive Leaf Extract possesses the most wide spectrum anti-bacterial, anti-fungal, anti-viral, anti-parasitic properties of all.
